# TABLE OF CONTENTS

## Invited Papers

1. **Atomic and R-Functions in Radiophysical Applications**  
   Kravchenko V. F. ................................................................. 3

2. **Slotted Waveguide Antennas for Practical Radar Systems**  
   Sekretarov S. S. and Vavriv D. M................................................... 13

3. **Metamaterials on Antenna Solutions**  
   Slyusar V. I. ............................................................................... 19

4. **State-of-the-Arts Reconfigurable Antennas – Principles, Devices, Applications**  
   Yashchyshyn Y. M. ....................................................................... 25

5. **Radiation Characteristics of a Wire Antenna with Finite Size Plane and Corner Screens**  
   Yeliseyeva N. P. and Gorobets N. N.................................................. 31

6. **The Development of Antenna Theory and Techniques in Lviv Polytechnic National University**  

7. **Enhanced Transmission Through Below-Cutoff Holes and Eigenoscillations of Waveguide Objects and Periodical Structures**  
   Anatoliy A. Kirilenko, Nataliya G. Kolmakova (Don), Andrey O. Perov ........... 47

8. **A new approach to analysis of curvilinear conducting surface radiators**  
   Dubrovka F. F. and Tolkachov O. V.................................................. 53

## General Antenna Theory

1. **Synthesis of 2d Directional Diagrams of Antennas with Arbitrary Aperture Based on Atomic and R-Functions**  
   Kravchenko V. F., Kravchenko O. V., Safin A. R.................................................. 63

2. **Kravchenko-Rvachov Probability Distribution in the Problems of Analysis and Synthesis for Linear Arrays**  
   Kravchenko V. F., Kravchenko O. V., Safin A. R.................................................. 66
3. **Axial Symmetric Electromagnetic Field of the Magnetic Strip on a Finite Cone**  
   Trishchuk O. B., Kuryliak D. B. .................................................................70

4. **Building of Tensor Green’s Functions for Solving of Radiation Problem from Slot in Wall of Sending Structure**  
   Morozov V. M., Magro V. I., Marmer V. S..................................................72

5. **Asymptotic Methods on the Solution of Diffraction Problems on the Convex Impedance Cylinders**  
   Vyunnik V. I., Zvyagintsev A. A. .................................................................74

6. **Influence of Reactive Sheet Resistance on Radiation Characteristics and Dipoles and Loop Aerials Dispersion**  
   Gerasimovich G. V. and Jubko A. P. ..........................................................76

7. **Resonance Properties of Quasiperiodic Layered Structures**  
   Andreev M., Borulko V., Drobakhin O., Sidorov D......................................79

   Dubrovka F. F., Piltyay S. I.........................................................................82

9. **Interacting of the Wire Antennas which Have Been Had in The Near-Field Region, with the Account Underlaying Surface**  
   Chekan S. A...................................................................................................87

10. **Mathematical Model of a Loaded Conical Antenna Excitation**  
    Doroshenko V. A, Shimuk Y. D. .................................................................90

11. **Scattering Properties of Thin Conductive Fibres**  
    Demidchik V. I., Kornev R. V., Kuharchik P. D.........................................93

12. **Interaction of Eigenwaves of the Insulated Image Dielectric Waveguide with System of Transverse Slots in the Screen**  
    Mayboroda D. V., Pogarsky S. A., Saprykin I. I.........................................96

13. **The Use of Equivalent Replacement Method for Design of Dual-Frequency Balanced Devices**  
    Oborzhytskyy V. I., Prudyus I. N. .............................................................99

14. **Curved Radiators in the Near-Field and Far-Field Zones of Observation**  
    Gorobets N. N, Trivaylo A. V.................................................................102

15. **Thin Vibrators with Arbitrary Excitation and Surface Impedance**  
    Nesterenko M. V., Katrich V. A., Dakhov V. M., Berdnik S. L. .................105

**Reflector, Lens and Hybrid Antennas**

1. **Isolation Ratio Between the Reflector Antennas which Have Been Had in the Near-Field Region**
   Chekan S. A.......................................................................................................................... 119

2. **Compact Multibeam Reflector Antenna for Satellite TV Signal Receiving**
   Vesnik M. V. ........................................................................................................................ 122

3. **A Double-Reflector Antenna of Millimeter Range with Wide-Angle Scanning**
   Naumovich N., Muravjev V., Yurtsev O., Moskaliov D., Kizimenko V., Baty C........................... 125

4. **Sphero-Conical Spiral Antenna**
   Lukyanchikov A. V., Salazko V. N., and Evstigneev I. A....................................................... 128

5. **Radiation Characteristics of a Novel “Ring-In-Cone” Antenna**
   Dubrovka F. F. and Bankowsky V. L.................................................................................... 130

6. **The Research of Antennas on the Cold Plasma**
   Ovsyanikov V. V., Jakimenko S. V., Moroz S. M. .................................................................... 133

7. **Circular Polarization Antenna for CW V-Band Radar**
   Kashin S. V. ......................................................................................................................... 136

8. **Plasmon Antenna with Complex Profile of Dielectric Permittivity Change**
   Hoblyk V. V., Nychai I. V., Liske O. M.................................................................................. 138

**Antenna Arrays**

1. **The Fast Converging Method of Calculation of Wire Radiators in Infinite Planar Phased Antenna Array**
   Kudzin V. P.......................................................................................................................... 143
2. Investigation of Solutions of the Non-Linear Synthesis Problem for Linear Array by the Generalized Newton Method
   Andriychuk M. I. ........................................................................................................145

3. Nonlinear Synthesis Problem of Flat Equidistant Antenna Arrays According to The Prescribed Amplitude Directivity Pattern
   Protsakh L. P., Savenko P. O., Tkach M. D. .................................................................148

4. Bearing Estimation of a Source with Complicated Spectrum Using a Moving Sparse Antenna Array
   Korotin P. I., Rodionov A. A. and Turchin V. I. ..........................................................151

5. Adjustment And Beam Forming In Circular Antenna Array with Conformal And Phase Scanning
   Bobkov Y., Yurtsev O., Moiseev A., Moskalev D. .......................................................154

6. EM Analysis of Planar Electronically Scanned Array Antennas with Radiating Element Errors
   C. S. Wang, M. Liu, L. H. Ping, and H. Bao .................................................................157

7. Bee Swarm Algorithm for Synthesis Of Antenna Arrays
   Galan A. Yu., Sauleau R., Nosich A. I., and Boriskin A. V. ........................................160

8. S-Band Planar Strip Array Antennas without Dielectric Substrate
   Martynyuk S. Y., Nazarenko S. B. .............................................................................163

9. Antenna Array Development with Non-Linear Signal Processing
   Lobkova L. M. and Lukjanchikov A. V. ........................................................................166

Adaptive Antennas, Smart Antennas, Signal Processing

1. Adaptive Antenna Systems of Telecommunication Networks
   Pelishok V. O. .............................................................................................................171

2. Array Signal Processing In Long-Range Multimode Channels: Optimal Schemes And Effects Of The Signal Coherence And Modal Noise
   Malekhanov A. I. ........................................................................................................174

3. Scattering Wideband Pulse Signals by Non-Smooth Surfaces
   Drobakhin O. O., Saltykov D. Yu. and Saltykov A. D. .............................................177

4. The View of Cable Connection Line as a Form of Antennas for Assessment of Its Protectability from External Noise During Videoinformation Transmission
   Dudka O. O., Tsopa O. I. and Shokalo V. M. ...............................................................180
### Table of Contents

5. **Investigation of the Reconfigurable Antenna with a Set of PIN Diodes**  
   Bajurko P. and Yashchyshyn Y. ............................... 181

### UWB, Broadband and Multi Frequency Antennas

1. **UWB Planar Antenna Dipole in the Sandwich Configuration**  
   Pergol M. and Zieniutycz W. ................................. 187

2. **Development of the Radiating Part of an Ultra-Wideband Tapered-Slot Antenna for GPR Applications**  
   Ye. Maksimovitch, V. Mikhnev, P. Vainikainen .................. 190

3. **The Broadband Multichannel UHF Transmitting TV Antenna**  
   Kudzin V. P., Sannikov N. J. ............................... 193

4. **Cross-Polar Radiation of a Dual-Band Coaxial Feed Horn with Partial Dielectric Loading**  
   Dubrovka F. F., Dubrovka R. F., Ovsianyk Yu. A. .............. 195

5. **An Excitation of the Linear Antenna by the Relativistic Charge in the Circular Waveguide**  
   Prijmenko S. D., Rjabkova E. P. ............................... 197

6. **Analysis and Design of Plasma Monopole Antenna**  
   Li Wei, Qiu Jinghui, Suo Ying ............................... 200

7. **Full-Band Frequency-Integrated Antenna Monitoring System**  
   Khymych H. P., Umzar Yu. A. and Tkachenko V. F. .......... 203

### Low-Gain, Printed Antennas

1. **Numerical Analysis of Patch Antenna as Antenna Array Element**  
   Kizimenko V., Bobkov Y. ........................................ 207

2. **Numerical and Experimental Research of Helical Antennas for GPS Applications**  
   Dubrovka F. F., Dolzhenko D. S., Sushko A. Ju. .................. 210

3. **The Linear Polarized Horn Antenna with Decreased Effective Scattering Area**  
   Manoilov V. P., Pavluk V. V., Sidorchuk O. L. and Karashchuk N. N. ........ 213
Antennas for Mobile Communications

1. Shaping Coverage using Antenna Arrays for Load-Balancing in Cellular Networks
   Wu J., Dubrovka R., Bigham J., Jiang P. .............................................................219

2. Wireless Backhaul in Cellular Networks Using Phased Array Antenna with Optically Controlled Phase Shifter
   Jiang P., Dubrovka R., Donnan R., Bigham J., Wu J. ...........................................222

3. Architectural Solutions of Testing Network for Mobile Operators
   I. V. Kashtanov and O. D. Arhelyuk ..................................................................225

4. Influence of Interference in GSM Network and Optimum Solutions
   I. V. Kashtanov and O. D. Arkhelyuk .................................................................228

Antennas for Remote sensing

1. The Usage Features of Multifrequency Space-Time Signals in Super-Fast Scanning Radar with Active Phased Antenna Array
   Gorshkov V. K., Leonov I. N., Sedyshev Y. N.,
   Shevchenko A. F, Tyutyunnik V. A. ......................................................................233

   Shirokov I. B. and Durmanov M. A. .....................................................................236

3. Estimation of Positions of Local Narrow-Band Sources on a Ship Hull Using a Vertical Antenna Array
   Orlov D. A., Rodionov A. A. and Turchin V. I. .....................................................239

4. Black Body as an Antenna and Transmitter Combination
   Titov A. N. ...........................................................................................................242

5. Integrated Antenna Synthesis of the Objects Monitoring Systems in the Microwave Band
   Prudyus I. N. Zubkov A. M., Zakharia Y. A. and Mymrikov D. O. .......................244

6. The New Method of Electronic Scanning
   Khludneva A., Mikhailov M., Paslyon V ..............................................................247

7. An Effective Approach to the Fast, GPU-Based, Through-Wall Imaging
   A. Capozzoli, C. Curcio, G. D’Elia, G. Iadarola, A. Liseno, P. Vinetti .............250
8. Experimental Research of Active UWB Video Pulse Scanning Antenna Array  

9. Polarization Selective Antennas for Reflected Wave Depolarization Determination  
Averyanova Yu. A., Yanovsky F. J., Averyanov A. A.................................256

10. Direction of Arrival Estimation with Sensor Arrays  
Czapska J. M. and Yashchyshyn Y.........................................................259

11. Near-Field Microwave Tomography  
Gaikovich K. P., Gaikovich P. K., Maksimovitch Ye. S., Badeev V. A., Mikhnev V. A.................................................................262

12. NUFFT-Based Imaging of Vegetation on Graphic Cards  
A. Capozzoli, C. Curcio, G. D’Elia, A. Di Vico, A. Liseno, P. Vinetti ..........265

Ponomarenko N. N., Lukin V. V., Abramov S. K., Egiazarian K. O.........268

14. Combined Antenna for a Mobile System of Radioacoustic Sounding  
Ulyanov Y. N., Misajlov V. L., Vetrov V. I .............................................271

Antenna Measurements

1. 3-Probe Microwave Measuring Instrument of Vibration of Mechanical Objects with Non-Plane Surface  
Drobakhin O. O., Doronin A. V. and Grigor’ev V. V...............................277

Slyusar V. I. and Voloshko S. V..............................................................280

3. Determination of Parameters of Antenna Model in the Form of Point Sources Using Scanning Measurements  
Andreev M. V., Borulko V. F.................................................................283

4. Adaptive Radiointerferometer with Microprocessor of a Signal in the Mobile Station of a Troposphere Communication  
Rudakov V. I.........................................................................................286

5. Diminizing Method of Measure Errors of Phase Radiation Pattern Microwave Antennas  
Mickhayluck Y. P..................................................................................289
Analytical and Numerical Methods

1. **Possible Way to Increasing of Finite-Difference Time-Domain Algorithm Efficiency**
   Soldatenkov V. P. ........................................................................................................295

2. **Antenna Synthesis Based on the Ant Colony Optimization Algorithm**
   Slyusar V. I. and Ermolaev S. Y.............................................................................298

3. **Scattering Properties of Carbon Nanotube Antennas**
   A. M. Lerer, V. V. Makhno, P. V. Makhno, O. S. Labunko...............................301

4. **Synthesis of Shaped Beam Antenna Pattern Using a New Phase Method of FAN Partial Patterns**
   Gribanov A. N., Titov A. N., Moseychuk G. F...................................................304

5. **An Optimized MAS for Solving Scattering Problems**
   A. Capozzoli, C. Curcio, G. D’Elia, G. De Bono, A. Liseno, P. Vinetti............307

6. **Computational Methods in Mathematical and Computer Modeling of Electromagnetic Field Distribution behind the Grate of Scatterers**
   Otdielnov V. A. .......................................................................................................310

7. **Mathematical Models of the Radiating and Waveguide Structures with N-Fold Periodicity**
   Hoblyk V. V................................................................. 312

8. **Mathematical Model of the Cylinder with Modulation of a Superficial Impedance by Periodic Sequence of Gaus Functions.**
   Hoblyk V. V., Pavlysh V. A................................................................. 314

9. **Mathematical Model and the Analysis of a Field of the Disk Impedance Antenna with Spiral Heterogeneity.**
   Hoblyk N. M., Hoblyk V. V................................................................. 316

10. **New Method of Graphic Representation of Electromagnetic Fields Structure**
    Gribanov A. N................................................................. 318

Microwave Components and Circuits, Fiber-Optic Links

1. **Generalized Analysis of UHF Transmission-Lines Juction Twoport with the Wire Coupling Element**
   Zakhariya Y. A. and Kobilyanska O. V .................................................................323
2. Comparative Analysis of Novel Compact and Usual Smooth 90-Degree Twists

3. Resonance of Total Rejection Produced by a Thin Vertical Stepped Conductor in Rectangular Waveguide
   A. A. Kirilenko, S. A. Prikolotin ........................................................................331

4. A Novel Broadband Coaxial Orthomode Transducer with High Port Isolation
   Dubrovka F. F., Vasylendo D. O. .......................................................................334

5. A Low Phase Noise Microstrip Push-Push Oscillator with Third Harmonic Output
   Kotserzhynski B. O., Omelianenko M. U., Tsvelikh I. S. .................................337

6. Millimeter-Wave Integrated Circuits Based on Novel Probe Microstrip Line and Coplanar Stripline Exciters
   Oleksandr Iezhov, Mykhaylo Omelianenko ......................................................340

7. Research on Operation Principle of Exploding Magnetic Generator of Frequency
   Ying Suo, Jinghui Qiu, Shouwei Gong ................................................................343

8. Circuit Realization Microwave Antennas-Oscillator on Strip Antennas
   Golynskyy V. D., Prudyus I. N. ........................................................................346

---

Industrial and Medical Applications of Microwave Technologies

1. Analysis of Fields Reflected from Model of Human Body Surface Using Artificial Neural Network in Time Domain
   Shyrokorad D. V., Dumin O. M., Dumina O. O., Katrich V. O. .........................351

2. Modelling of Street Radio Links as Microwave Multiports at Work of System Wimax in the Conditions of the City
   Strelnitskiy A. A., Tsopa A. I., Shokalo V. M. ....................................................354

3. Resonance Near-Field Microwave Diagnostics in Dermatology
   Kostrov A. V., Strikovskiy A. V., Yanin D. V., Smirnov A. I.,
   Pantileeava G. A., Davoyan Z. V. ........................................................................357

4. The Process of Recovery of Cell Membrane Damage Produced by the Low-Level Microwave Radiation
   V. N. Pasiuga, Yu. G. Shckorbatov, N. N. Kolchigin,
   D. D. Ivanchenko, V. I. Bykov ...........................................................................360
5. **Research of Multiantenna Systems of Telecommunication Networks**
   Klimash M. M., Pelishok V. Ó., Yaremko O. M. .........................................................363

6. **Control of the Radiation Characteristics of a Leaky-Wave Antenna by Manipulation of the Grating Profile**
   Steshenko S. O. and Kirilenko A. A. .................................................................366

7. **The System of Longitudinal Slots in a Waveguide with Dielectric Layer**
   A. A. Lyakhovsky, A. F. Lyakhovsky, N. K. Blinova and L. P. Yatsuk........369

8. **Mutual Interaction Between Vee-Dipoles Placed over the Interface Between Two Media**
   Panchenko Yu. A. ..................................................................................................372

9. **Control of Directional Diagram of the Inphase Array for Radiators of Supershort Radio Impulses**
   Shostko I. S. ..........................................................................................................374
