The physical aspects and methods of detection action caused by energy-informative devices of Integrative Medicine

Oleksandr Arkheljuk, Leonid Pidkamin, Yuri Dobrovolscy

Abstract – Two basic constituents of effects of action by separated energy-informative devices of Integrative medicine on the functional state of human beings are selected and partially substantiated: methods of detecting specified impact are described and the results of experimental research of some devices are presented.

Keywords - Integrative Medicine, energy-informative devices, biological correctors, bio resonance, “effect of form”.

It is considered, that biological correction of organism of human being takes place as a result of the energy-informative influence of separate elements of biological activators. But the mechanisms of such influence are not yet known. They need more detailed scientific grounds. According to the review of achievements of modern science in the work two basic constituents of effect of action on the human organism of pictographic biological activators are selected: 1 - the phenomenon of bio resonance; 2 - “effect of form”, which is accompanied by appearance of the operating informative field.

1) Separate elements of pictographic biological activators, for example, a volume figure, coil of definite form or separate symbol, can be considered as the generators of the wave electromagnetic influence of small power. If the form and frequency of signal of such generator has got resonance descriptions, which coincide with their own frequency descriptions of organism or its organs, the prolonged influence of such action will be rather perceptible. For interference in the processes of operating such influence it is possible to use emitters, including passive ones, with the definite geometrical structure. On the basis of methods of geometrical optics, we conducted computer design of the electromagnetic field formed by one of widespread in geometrical semantics sign - rune FEHU (Fig. 1).

2) “The effect of form” of definite figures, according to the hypothesis of the Physical vacuum and torsion fields, is the source of radiation, which is low powered, but substantially informative. It determines its high efficiency of action not only on the organism of human being, but also on its consciousness and sub-consciousness. It is clear, that such radiation appears at the location of any material object, for example - biological activator in the vacuum. Then its general radiation will occur as components retain the torsion field, caused by the “effect of form”, as well as electromagnetic one which is formed by the surface of separate figures or other elements. On the basis of Michelson’s interferometer of we performed the experiment on the exposure of this total action on the process of structure of the distilled water. [1,2]

Among the sensitive methods assessing the impact of environment on the process of structuring water the method based on gas-discharge visualization (GDV) should be noted. In our research the difference in brightness under construction dependent luminescence of carbon pills with water without affecting by selected devices and water after their actions. Numerical results of the measurements shown at Table 1, where numbers with 1 - Spinor, 2 - Bioactivator, 3 – Forpost - 1, 4 - KFS (corrector functional state “Centre Region”), T.G.1 - 5, T.G.2 – 6, T.G.3 - 7, Shunhutov’s pyramid -8.

Devices numbered 5, 6, 7 refers to structured sources of electromagnetic fields with different frequencies (F) and intensity (P) radiation (#5 – P=0, F=0; #6 – P=16, F=25; #7 – P=22, F=45). According to the results “Spinor” and “T.G.2” affect the water so that the energy luminosity of the water decreased, “Bioactivator, “T.G.3” and “Shunhutov’s pyramid” increasing “energy” of water. They “switched on” the presence of external radiation field of the object (person, device, electronic equipment, etc.). For example, on the result shown in Figure 3, "Forpost-1" neutralizes action “CEM-TECH” to water. Impact of device “T.G.” essentially depends on the intensity and frequency of its radiation. This fact requires some research. The greatest effect recorded using the device “Spinor” (reducing "energetical" of water by 38%).

The results indicate the relevance of development issues and scientific and applied aspects of investigation of the nature and mechanisms energy-informative impact on human beings.

CONCLUSIONS

1. Physical basis of the mechanism of energy-informative devices is “biological resonance” and the "effect of form.
2. Depending to the design and technological features bio correctors may have the opposite effect on the results of biological systems.
